SMARTSTOCK INVENTORY

“Turning manual stock tracking into intelligent decision-making.”

Presented By

SOMATECH

Problem Statement

Cambodia's SMEs are flying blind on inventory — every single day

01 THE REALITY

70%+ SMEs still track stock with notebooks & Excel

- Facebook is the primary sales channel with zero structured data
- Orders come via Messenger untracked
- No forecasting. Just guesswork.

02 WHO AFFECTED

Small retailers, market vendors, and Facebook commerce sellers

- Shops selling through Facebook Pages & Groups
- Retailers with no budget for enterprise ERP tools
- Owners managing stock alone no dedicated staff
- Businesses tied to Cambodia's seasonal calendar

03 WHY IT EXISTS

No affordable tools built for Cambodia's commerce reality

- Demand spikes every Khmer New Year, Pchum Ben, 11.11
- Sales data trapped in Messenger threads
- Existing tools are too complex or too expensive
- Owners can't anticipate what they can't measure

04 THE COST

Stockouts & overstock drain the businesses that can least afford it

- Lost sales at peak season — the worst time to run out
- Overstock locks up scarce working capital
- Cash flow instability blocks growth & restocking
- Operational inefficiency compounds every month

USER PERSONA

Lika: Clothing seller via Facebook

"I only realize I'm out of stock when customers start asking. By then it's already too late."

TOOLS USED FOR ONLINE BUSINESS

USER PERSONA

Niko: Owner of a convenience store with a POS

"I have the machine, I have the data. But at the end of the day I still just guess when to call my supplier."

TOOLS USED FOR ONLINE BUSINESS

WHO WE SERVE

TARGET CUSTOMER

50–1K Stock Keeping Unit Range

Small enough to feel manageable — large enough to lose track

WHAT THEY SHARE

No real inventory system. Decisions run on memory, Excel, or gut feel.

WHEN IT HURTS MOST

Seasonal peaks — **Khmer New Year, Pchum Ben** — when stockouts cost the most.

PHYSICAL RETAIL SHOP

Runs out of best-sellers with zero early warning — finds out only when the shelf is empty.

50 – 300 SKUs
Walk-in · Market stall

FACEBOOK COMMERCE SELLER

Sales happen in Messenger DMs — completely untracked. Can't see what's selling or what's low.

100 – 500 SKUs
FB Page · Marketplace

MULTI-CHANNEL RETAILER

Stock is split across walk-in, online, and delivery — no single source of truth. Oversells weekly.

100 – 500 SKUs
FB Page · Marketplace

HOW WE SOLVE IT

THE SOLUTION

An **AI-powered SaaS** platform that turns sales history into actionable stock decisions — built for non-technical SME owners.

SIMPLE DASHBOARD

Predicts product demand 30 days ahead using historical sales patterns and seasonal trends.

Fixes: stockouts during Khmer New Year & peak season

DEMAND FORECASTING

Automatically flags items running low and recommends reorder quantities before it's too late.

Fixes: finding out stock is empty only at the shelf

TELEGRAM AUTOMATION

Sends reorder alerts and stock summaries directly to the owner's Telegram — no app needed.

Fixes: owners who live on mobile, not desktop dashboards

MULTI-CHANNEL SYNC

Stockouts & overstock drain the businesses that can least afford it

- Lost sales at peak season — the worst time to run out
- Overstock locks up scarce working capital
- Cash flow instability blocks growth & restocking
- Operational inefficiency compounds every month

BUSINESS OBJECTIVES

30d
forecast
window

HYBRID FORECASTING MODEL

Combines Facebook Prophet for seasonal trend detection with LSTM neural networks for short-term demand shifts — tuned for Cambodia's peak-heavy retail calendar.

Why It Matters

Predicts stockouts before they happen — not after the shelf is empty.

~80%
decisions
automated

ML RESTOCK AUTOMATION

Scores each SKU daily — flagging reorder priority, optimal quantity, and timing automatically. Owners get a decision, not a spreadsheet.

Why It Matters

Removes the guesswork that costs SMEs cash flow every month.

30d
forecast
window

MULTI-PLATFORM INTEGRATION

Ingests real-time data from Facebook Commerce, local delivery apps, and walk-in POS into one unified stock view — no manual reconciliation.

Why It Matters

One source of truth across every channel an SME sells on.

PRODUCT DEVELOPMENT PLAN

MONTH 1

Research & Architecture

- SME interviews & user discovery
- Define MVP scope & features
- UI wireframes & user flows
- Cloud infrastructure setup

MONTH 2

MVP Development

- Inventory module
- User management & auth
- Forecast model integration
- Dashboard UI

MONTH 3

AI Optimization

- Improve forecast accuracy
- Build smart reorder algorithm
- Telegram alert automation
- Multi-channel sync layer

MONTH 4

Pilot Launch

- Onboard 5–15 SMEs
- Collect real usage data
- Validate forecast performance
- Prepare paid conversion

OPPORTUNITY FOR BUSINESS

Short-Term

ESTABLISH & CAPTURE

First Mover: No AI-powered inventory tool exists for Cambodia SMEs — we move first and build the brand.

Underserved Micro Retail
Target Phnom Penh retailers — high density, high pain, low digital adoption.

Mid-Term

EXPAND & PARTNER

POS Provider Partnerships: Integrate with existing POS vendors to embed SmartStock as their AI layer — channel distribution at scale.

ASEAN Expansion: Replicate Cambodia model in Myanmar, Laos, and Vietnam — same underserved SME profile.

Long-Term

PLATFORM & INTELLIGENCE

SME Retail Intelligence Platform: Evolve beyond inventory — offer purchasing insights, supplier matching, and demand benchmarking across the network.

Data Network Effects:
oCross-SME data creates a proprietary demand signal no competitor can replicate.

EXPECTED **BENEFIT** OUTCOME

For SMEs:

- 20–40% reduction in stockouts
- 30–50% reduction in overstock
- 5–10 hours saved weekly
- Improved cash flow stability

For Investors:

- Recurring SaaS revenue
- High-margin digital product
- Scalable regional expansion

VISION & CONTACT

Vision:

To democratize AI-powered inventory intelligence
for Cambodian SMEs.

SmartStock will become the decision engine for retail
SMEs in Cambodia.
